For centuries, silk and spices from China flowed into Europe through the silk route. In 1295, Marco Polo, a great explorer, returned to Italy after many years of exploration in China. As you know, China already had the technology of woodblock printing. Marco Polo brought this knowledge back with him. Now Italians began producing books with woodblocks, and soon the technology spread to other parts of Europe. However, luxury editions were still handwritten on very expensive vellum, meant for aristocratic circles and rich monastic libraries which scoffed at printed books as cheap vulgarities.
As the demand for books increased, booksellers all over Europe began exporting books to many different countries. But the production of handwritten manuscripts could not satisfy the ever increasing demand for books. Copying was an expensive, laborious and time consuming business. Manuscripts were fragile, awkward to handle, and could not be carried around or read easily. Their circulations therefore remain limited. With the growing demand for books, woodblock printing gradually became more and more popular. There was clearly a great need for even quicker and cheaper reproduction of texts. This could only be with the invention of a new print technology. The breakthrough occurred at Strasbourg, Germany where Johann Gutenberg developed the first known printing press.
