You start with a four-digit number where not all digits are the same. Arrange the digits from highest to lowest, and then from lowest to highest. Subtract the smaller number from the larger. Repeat the process. Surprisingly, you will always end with number 6174 in a few steps (usually 3-4). This magical number is called Kaprekar constant. Based on the above information, answer the following questions:

- i) What is the Kaprekar constant? (1)
